

Variance Report

- **Version:** 0.1
- **Status:** Released.
- **Release Date:** 29.03.2023
- **Author** - Swethavarnaa U
- **Requester / Approver:** SaravannaBhaskar Raja / Densingh Augstin
- **Problem description:** The variance report under config → endpoint screen → variance report was reported to be having issues with displaying vm variance data for many endpoints or no data was found in the report for several days.
- **RCA:**
 - Connectivity timeout issue between Java catalyst-service and Python Endpoint Broker.
 - vmodl.fault.ManagedObjectNotFound exception in EPB for VM's that was terminated or not properly created properly.
 - NFE (Number Format Exception) while processing VM's vlan range causing exception for all VM resulting in 0 to No successfull VM data insertion in catalyst database.
- **Solution Provided:**

Backend Summary:

 - Updated catalyst-service to Asynchronous queue to make API call instead of synchronous queue to communicate with endpoint broker overcoming the connectivity time out issue.
 - Handled NFE by adding regex based splitting for multiple vlan ranges.
 - vmodl.fault.ManagedObjectNotFound was handled by skipping VM's that don't have MO.
- **Change Logs:**

```
Catalyst-Service, Catalyst-Core  
`/discoverAll/all`  
`VmDiscoverListener`
```

```
EPB ESXI, EXSI_67  
`Compute.py/discover`
```

- **Pages Affected:**
 - config → Endpoint → Variance Report
- **UI/UX:** No changes.
- **Data Modelling:** NA
